

Same Location Classified by Each Embedding Configuration (Cell 31320)

v2

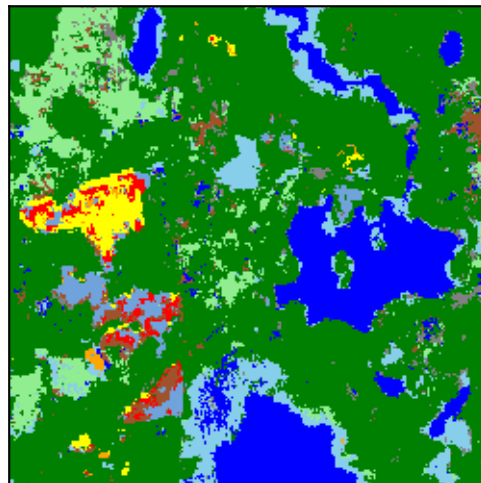

neighbor-change 0.085

v3

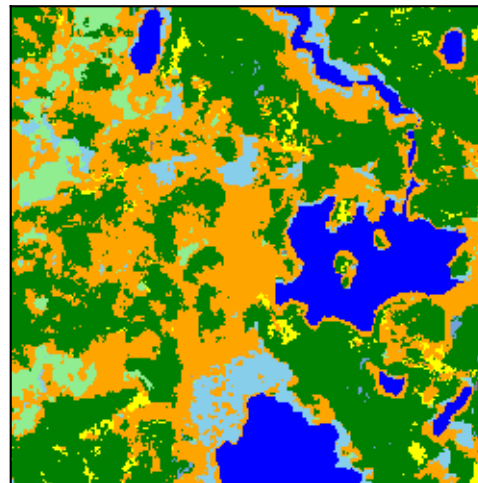

neighbor-change 0.084

v4

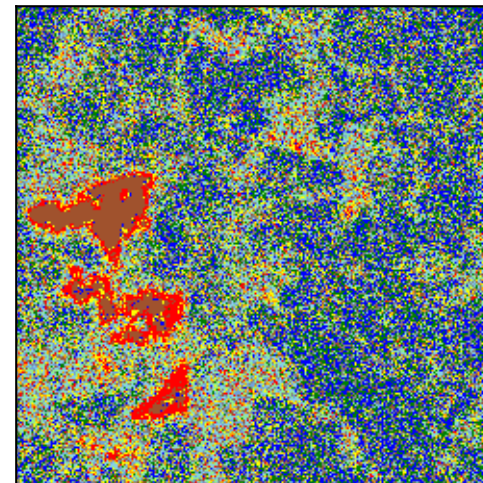

neighbor-change 0.155

v5

neighbor-change 0.093

v6

neighbor-change 0.801

The same NAIP grid cell (cell 31320) classified by each embedding configuration, v2 through v6, with the standard land-cover class colors. Each panel is annotated with its neighbor-change fraction, the share of horizontally adjacent pixel pairs assigned differing classes pooled over all 180 cells, a per-pixel speckle measure. The scale bar is 1 km. The dot-product configuration v6 fragments into salt-and-pepper speckle, while the baseline-preserving configurations stay spatially coherent.
