

Same Location Classified by the Spectral Baseline and Embedding Configurations (Cell 31320)

spectral

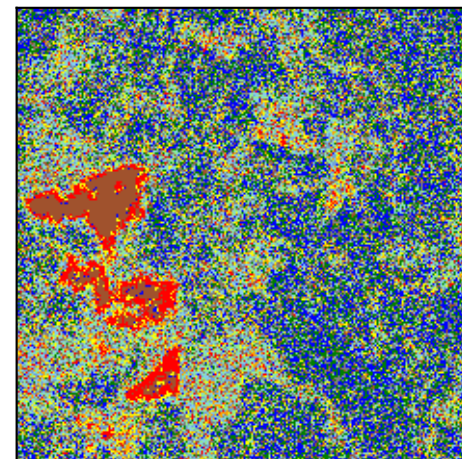

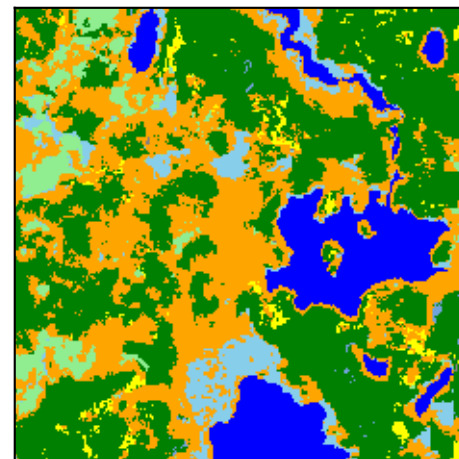

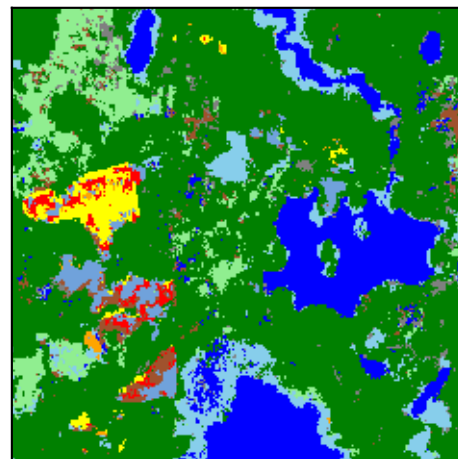

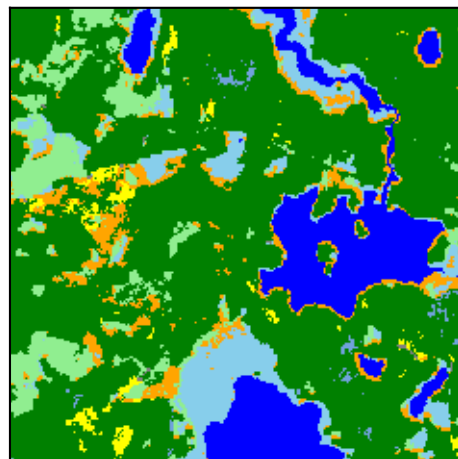

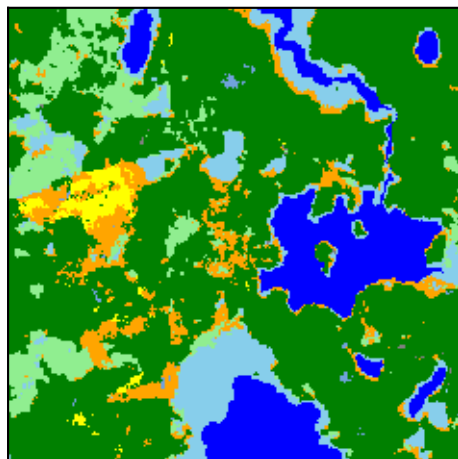

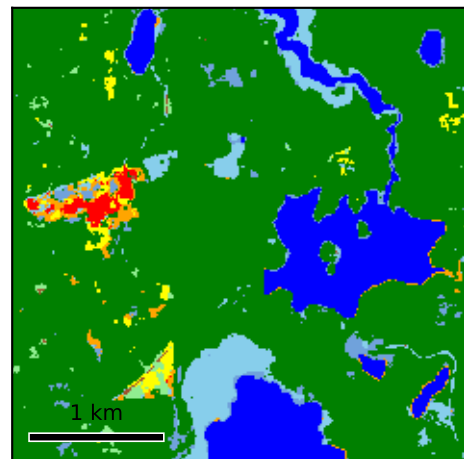

v2

v3

v4

v5

v6

The same NAIP grid cell (cell 31320) classified by the spectral baseline (spec_all) and by each embedding configuration, v2 through v6, with the standard land-cover class colors. The scale bar is 1 km. The dot-product configuration v6 fragments into salt-and-pepper speckle, while the spectral baseline and the baseline-preserving embedding configurations stay spatially coherent.
